Monday, December 4, 2023: 1:15 pm to 1:50 pm EST

Using OpenGround for managing ground investigation data

Presenters: Philip Child and **Sudur Roy**

This presentation will demonstrate how OpenGround can be used to assist the planning and execution of fieldwork as well as the presentation of data for both reporting and classification purposes. This session is a worked extract from the *Subsurface Connected Workflow with Seequent* and thus represents the first step in a broader process using other Seequent applications.
